

## High Power PM Optical Circulator 1550nm

The 3 port 1550nm High Power Polarization Maintaining (PM) Optical Circulator is a fiber optic component built with PM fiber. It allows light to be transmitted in only one direction while blocking the opposite transmission, its light path is port 1 to port 2, and port 2 to port 3. The PM fiber circulator is widely used in optical fiber networks and amplifiers where polarization maintaining characteristics are needed. High Power handling up to 10W available upon request.
