

High Power PM Optical Circulator 1053nm

The 3 port 1050 1053nm High Power Polarization Maintaining (PM) optical circulator is a fiber optic component built with PM fiber. It allows light to be transmitted in only one direction while blocking the opposite transmission, its light path is port 1 to port 2, and port 2 to port 3. The PM fiber circulator is widely used in optical fiber networks and amplifiers where polarization maintaining characteristics are needed. High Power handling up to 10W is available upon request.
