

3-port Polarization Maintaining Optical Circulator 2000nm

The 3 port 2000nm (2 micron, 2μm) polarization maintaining (PM) optical circulator is a fiber optic component built with PM panda fiber. It allows light to be transmitted in only one direction while blocking the opposite transmission, its light path is port 1 to port 2, and port 2 to port 3. The PM fiber circulator is widely used in 2μm optical systems where polarization maintaining characteristics are needed.
