

Variable Optical Attenuator, C + L Band

The C + L Band Mechanical Variable Optical Fiber Attenuator (VOA) is a micro-optic component designed to control the attenuation of the optical signal passing through it, the desired attenuation can be precisely achieved by adjusting a screw. It can be used to precisely balance the signal strengths in fiber circuits, or, it can be used to balance an optical signal when evaluating the dynamic range of the measurement system.

Features

- Low Original Loss
- Good Adjustment Precision
