

3-port Multimode Polarization Insensitive Optical Circulator S+C+L Band

The 3 port S+C+L Band Multimode Polarization Insensitive Optical Fiber Circulator is a fiber optic component built with multimode fiber. It allows light to be transmitted in only one direction while blocking the opposite transmission, its light path is port 1 to port 2, and port 2 to port 3. The fiber circulator is widely used in optical fiber networks and fiber instruments. High Power handling is available upon request.

Features

- Low IL & High Isolation
- Broadband operating
