

Polarization Maintaining Optical Circulator 1310nm

The 3 port 1310nm polarization maintaining (PM) optical circulator is a fiber optic component built with PM panda fiber. It allows light to be transmitted in only one direction while blocking the opposite transmission, its light path is port 1 to port 2, and port 2 to port 3. The PM fiber circulator is widely used in optical fiber networks and amplifiers where polarization maintaining characteristics are needed. High Power handling is available upon request.
